

Fast aquatic weed control that's easy on surroundings

- Fast acting—"No wait, no worry."
- Controls more than 15 invasive and nuisance aquatic weed species
- Effective on marginal, floating, and submerged weeds
- Easy on surroundings
- No swimming or fishing restrictions following application

Your application professional is helping you protect and beautify your body of water with Reward[®] Landscape and Aquatic Herbicide from Syngenta Professional Products. He has been trained to use this product to achieve optimal results, without causing harm to the environment. Invasive plant species, introduced to waters throughout the United States, take their toll on beneficial indigenous aquatic species. These invasive species make many waterways difficult, if not impossible, to enjoy. Syngenta and Reward have been trusted names in the aquatic management industry for many years.

Duckweed

Elodea

Waterlettuce

Hydrilla

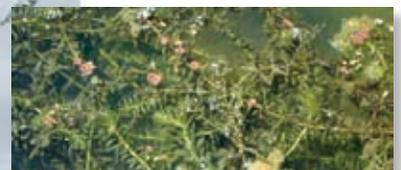

Waterhyacinth

Coontail

Watermilfoils

Egeria densa

Salvinia

Frequently Asked Questions about Reward:

How long does it take to see results?

From a few hours to a few days, but generally one week or less. Control is dependent on weed type and environmental conditions (sunlight, water temperature).

Why doesn't my applicator treat all areas at one time?

If your problem area is small, one application is all that may be necessary. But if you have a larger weed problem, applications may be done in stages. This allows the weeds to decompose gradually without lowering oxygen levels needed by fish.

Is Reward toxic to wildlife?

Based on 45 years of data, the EPA has concluded that Reward poses no unreasonable risk to fish or other aquatic organisms.

Why does the applicator wear protective gear if the product is not toxic?

The applicator wears this equipment as a precaution when handling the chemical in its concentrated form. Once the product has been applied, it dilutes quickly, allowing for normal activity to resume.

When can water be used after treatment with Reward?

When used in accordance with label instructions, water is safe to use with minimal time restrictions depending on activity. See chart.

Activity	Number of days after treatment before use
Recreational (swimming or fishing)	0 days
Drinking water	1–3 days depending on rate
Livestock consumption	1 day
Crop irrigation	5 days

Who is Syngenta?

Syngenta is the international leader in the insect, weed, and disease control products industry. With a broad portfolio of products, Syngenta is committed to creating dependable insect, weed, and disease management solutions for professionals who want to give their customers pristine water and landscape conditions.

See product label for complete details.
